

UNDERFLOOR SUPPORT

Product Features

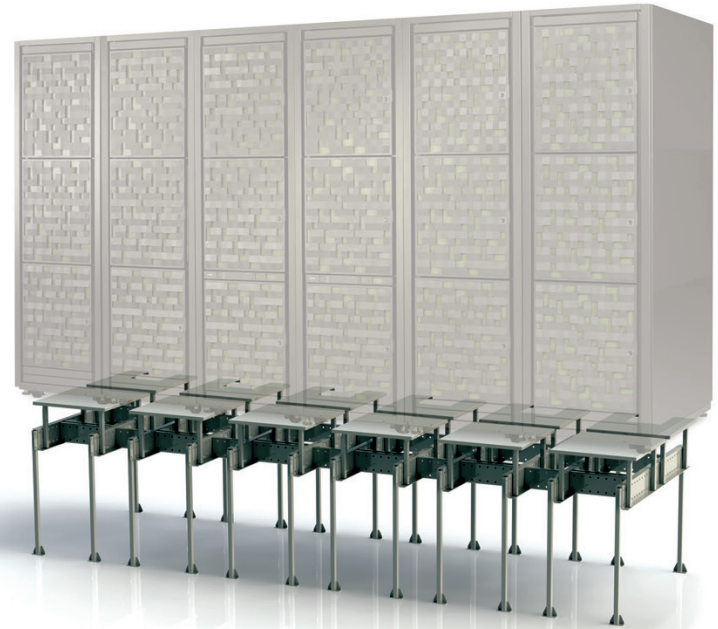

Finish

- Zinc plating

Structure

- Fabricated of 12 GA (0.108") steel
- Modular design to accommodate standard floor heights and tile sizes.
- Expansion of the system is a matter of adding more sections of support.
- The system is height adjustable directly underneath the support pad by means of 4 jack screws.
- Should your application require modifications not accounted for in the modular system, please contact CableTalk directly to discuss customization.

Used to supplement the weight capacity of new or existing raised floor systems adding 850lbs per 2'x 2' tile beyond the tile's original load rating. The design load and uniform load both as the mounting pan acts as a force distributor plate, so that translates to a uniform load increase of 212.5lbs/sq.ft, the CableTalk Underfloor Support is designed to work in conjunction with a standard raised floor system by supporting the floor tiles directly.

Raised floor structure removed for clarity
